

The scenario

Enterprise Seller, Sales Lead Engagement

Imagine a Seller at a mid-sized backup power and generator systems company. The sales team covers dozens of prospect accounts spanning electronics, biotechnology, manufacturing, and hospitality. Sellers spend hours researching each prospect before outreach — or skip the research and send generic messages that get ignored. The information they need already exists: recent account news, relationship data across the organization, and CRM history — but assembling it for each prospect is manual and slow. Meanwhile, competitors who personalize effectively are winning the first conversation.

Who should act

Sales Operations and Marketing Ops understand your ideal customer profile (ICP), messaging frameworks, and CRM structures — they're well-positioned to configure and tune these agents.

Marcus

Marcus is a 34-year-old Enterprise Seller covering a wide portfolio of prospect accounts. He wants every outreach to feel researched and specific — but manual account research eats into the time he could spend actually selling.

Problem

Your Persona struggles from this issue

Marcus struggles to research each prospect thoroughly before reaching out. News, relationship history, and case-study fit all live in different places, and pulling them together can take longer than the outreach itself.

Pains

And especially these negative consequences

- Feeling rushed and under-prepared before high-stakes calls
- Losing track of which colleague already has a relationship with an account
- Dreading the grind of matching case studies to the right industry by hand

Goal

Your Persona wants to achieve this transformation

In the end, Marcus wants a complete, personalized account briefing in seconds — account snapshot, why now, relevant proof point, and warm path — so every outreach is targeted, not generic.

Benefits

So they can experience these positive consequences

- Less time on manual research, more time actually selling
- Higher response rates from timely, personalized outreach
- Warm introductions used instead of always going in cold

Trigger

This event pushed your Persona to find a solution

Recently, a competitor reached a hot prospect first — while Marcus was still manually researching the account instead of already reaching out.

Barriers

But these doubts slow your Persona down

- Doubts an AI-drafted brief will be accurate enough to trust in front of a prospect
- Concerned about learning another tool on top of the CRM
- Worried a bot-sounding message could hurt a relationship-based sale

Use Case

Use Case: AI Sales Lead Research & Outreach

What's the idea? What are we trying to solve?

Time-consuming, manual prospect research scattered across CRM, news, and old case studies

Use AI agents to research prospects and draft personalized outreach automatically

What is the business / human value?

Time Spent on Research Drops Dramatically

Sellers Engage With Confidence

Response Rates Climb

Faster, More Personalized Outreach

Who are the key stakeholders?

Users

Sellers

Sales Managers

Who should act (configure & tune)

Sales Ops & Marketing Ops

They understand your ideal customer profile, messaging frameworks, and CRM structures — well positioned to configure and tune these agents.

Solving it: one unified grounding layer, three agents

SOLUTION EXAMPLE

Sales Lead Engagement for Backup Power & Generator Systems

For this business, the challenge wasn't a lack of data — it was knowing what matters right now across dozens of prospect accounts, industries, and relationships, scattered across CRM records, news feeds, and unstructured case studies.

Example: A seller asks the agent, “Should I reach out to Edge Communications, and what should I say?” **Research Agent** already knows the account's recent news and real-time triggers, plus the right case study and product fit for its industry. **Warm-Path Agent** checks existing relationship history in that same layer. **Outreach Agent** then assembles everything into one complete, personalized brief and opening line — all three agents grounded in a single Salesforce Data Cloud (Data360) layer, orchestrated through Agentforce. That's closing the intelligence gap between scattered systems and a confident, timely first conversation.
